The Problem		
"I'm tired of being sick all the time."		Description: Sick man. File: Sick man.jpeg Source: Unsplash
"My health is not what it used to be."		Description: Chronically ill woman. File: WomanAtDesk.jpeg Source: Pexels
"It's hard to stay on top of things when people keep calling out sick."		Description: Tired woman at work. File: TiredWoman.jpeg Source: Pexels
We may be done with the pandemic but the pandemic is not done with us. According to the CDC, in the first 2 months of 2024 alone, Covid caused over 15,000 deaths in the US - and over 200,000 hospitalizations. And more than 17 million Americans have Long Covid - a condition that can make it hard to work, exercise, and take care of their families. The Solution / WIIFM		

To keep our communities healthy and safe, it's not enough to wash our hands. We also need to clean the air.	Wash your hands often	Description: Vintage handwashing poster. File: WashHandsOften.jpeg Source: getarchive.net (public domain)	
Many common illnesses, like Covid, the flu, and norovirus are airborne. Tiny particles of the virus hang in the air like smoke. We breathe them in, and we get sick.		Description: Animation of viruses entering lungs. File: Airbornelllness.mp4 Source: Corsi Rosenthal Foundation	
But a simple, low-cost, DIY air purifier can reduce the spread of illness in your community. You can make a Corsi-Rosenthal box - or CR box - in 30 minutes or less with materials from a typical hardware store.		Description: Diagram of supplies File: CRSupplies.jpeg Source: Corsi Rosenthal Foundation	
CR boxes have been shown to work just as well as store bought air purifiers. They reduce the spread of illness and pull bacteria, allergens, chemicals, smoke, and other pollutants out of the air and away from your lungs		Description: Animation of CR box pulling in particles. File: CRBoxWorking.mp4 Source: Corsi Rosenthal Foundation	
so that you and people in your community can breathe easy, concentrate better, and work better together.		Description: Video clip of people collaborating. File: Collaboration.mp4 Source: Pexels	
The Solution is Easy (Quick Overview of Process)			
The process is simple: Measure each room you need to ventilate to figure out how many CR boxes you'll need per room.	1	Description: Two men measuring a room	
		File: Measuring.jpeg Source: Pexels	

Use duct tape to connect 4 filters, with a cardboard base and a box fan on top	2	Description: Time lapse animation of box being built File: Overview.mp4 Source: Corsi Rosenthal Foundation
If you want to get creative, you can paint your air purifier or add decorations.	3	Description: Time lapse animation of box being decorated File: Overview.mp4 Source: Corsi Rosenthal Foundation
Plug in your air purifier and keep it running to clean the air of viruses, bacteria, and toxins.	4	Description: Person plugging in air purifier File: Plugln.mp4 Source: Corsi Rosenthal Foundation
Maintenance is cheap and easy. Simply change the filters every 9 to 12 months.	5 Save the	Description: Person writes save the date in calendar. File: SaveTheDate.mp4 Source: Pexels

Research shows that clean air improves cognitive function, mental health, and overall productivity, and can reduce the spread of illness. The overall result? Healthier people who are less likely to call out sick - and who have more time and energy to focus on what matters.
